

# HOW TO STOP THE BITE

PREVENTION IS KEY!  
LEARN THE D's

## DAWN & DUSK

While mosquitoes can bite at any time of day, it's wise to limit your exposure during their prime feeding times. If you can't avoid being outdoors during DAWN & DUSK, be sure to take some other precautions.

## DRAIN & DUMP

Remove standing water in gutters, abandoned tires, buckets, toys or any container that accumulates water. Even, tree holes and ditches need attention! Frequently change the water in bird baths, fountains, wading pools, and potted plant trays, animal drinking bowls. Keep swimming pool water treated and circulating.

## DOORS

Doors and windows should all have screens! Use screens on the windows or air conditioning to keep mosquitos from slipping in a window. Or if you don't have screens, consider getting a fine mosquito net to hang over your bed or crib.

## DRESS

Dress appropriately when going outside! Apparently, deep colors — like black, deep blue and red — stand out so they attract bugs. Thicker fabrics and looser fits offer more protection that thin clothing that fits tightly. Check out permethrin treated clothing!

## DEFEND

Oil of lemon eucalyptus comes from a particular eucalyptus tree (*Eucalyptus citriodora*) from Australia. The synthetic version, which is endorsed by the CDC as a repellent, is available under brand names including Repel, Bug Shield and Cutter. Studies show it offers similar protection to products containing low concentrations of DEET

Lolo Mosquito District  
2825 Santa Fe Ct  
Missoula, MT 59808

POSTAL PATRON  
LOLO MT 59847

**Please join us JUNE 8th - 7pm at the LOLO  
Community Council Meeting to LEARN  
MORE about the Mosquito District**

**THE LOLO MOSQUITO DISTRICT**

uses a larval treatment to control mosquito breeding sites. An adulticide is applied late in the evening during periods of high mosquito populations (JUNE & JULY) for control of adults!
